

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

II. REMARKS

Claims 1, 2, 5-7, 9, 10 and 12-16 are pending in the application and the Office Action rejected Claims 1, 2, 5-7, 9, 10 and 12-16. By the foregoing amendments, Applicants amended Claims 1, 10 and 13 to further clarify, more clearly define and/or broaden the claimed invention, and expedite receiving a notice of allowance. Pursuant to 37 C.F.R. § 1.121(f), no new matter is introduced by these amendments. Applicants believe that Claims 1, 2, 5-7, 9, 10 and 12-16 are now in condition for allowance.

Please note that Applicants' remarks are presented in the order in which the issues were raised in the Office Action for the convenience and reference of the Examiner. In addition, Applicants request that the Examiner carefully review any references discussed below to ensure that Applicants' discussion and understanding of the references, if any, is consistent with the Examiner's. Further, the following remarks are not intended to be an exhaustive enumeration of the distinctions between any particular reference and the claimed invention. Rather, the distinctions identified and discussed below are presented solely by way of example to illustrate some of the differences between the claimed invention and that reference.

Response to the Section 103(a) Rejection

The Office Action rejected Claims 1, 2, 5-7, 9, 10 and 12-16 under 35 U.S.C. § 103(a) as being unpatentable over U.S. Patent Publication No. 2003/0233967 to Lin. The Office Action stated that the Lin publication teaches a table (1) with a table top; the table top having a top surface and a bottom surface; a mounting structure (12) centrally disposed on the bottom surface; and the mounting structure (12) including a first generally c-shaped portion (A', I', K') including

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

a center section (A') that is defined by the grooves (13), a first end portion (K') and a second end portion (I'). The Office Action also stated that the mounting structure (12) includes a second generally c-shaped portion (B', J', L') including a center section (B') defined by the grooves (13), a first end portion (L') and a second end portion (J'). The Office Action acknowledged that even though there are grooves between and defining the end portions from center sections, the bottoms of the grooves are still raised from the bottom surface of the tabletop and therefore the end portions are considered connected to the center sections. In addition, the Office Action stated a box-like region is disposed in the bottom surface of the tabletop as defined by the parts of the mounting structures as seen in Figure 1.

The Office Action also stated that the Lin publication teaches a support assembly (26, 27) that is partially connected to the mounting structure (12). The Office Action stated the center sections (A', B') have a surface that is generally perpendicular to the bottom of the table where the elongated supports (E', F') are attached. The Office Action stated both attachment surfaces are taught as being generally round which are considered to have portions that are generally planar due to the term "generally" being viewed in the broadest reasonable interpretation to encompass a semicircular surface.

In addition, the Office Action stated the support assembly comprises a first elongated support member (E') attached to the center portion (A') of the first generally c-shaped portion (A', I', K') of the mounting structure (12) and a spaced apart second elongated support member (F') attached to the center portion (B') of the second generally c-shaped portion (B', J', L') of the mounting structure (12). Additionally, the Office Action stated the Lin publication teaches a first connecting member (G') that is connected to the first support member (E') and the second

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

support member (F'); a frame assembly having a first leg (23) which is attached to the first end of a first support brace (25); the second end of the first support brace attached to the first connecting member (G') of the support assembly (26, 27); the mounting structure (12) comprising a pair of C-shaped mounting ridges (A', B') formed in the first portion (A', C') and the second portion (B', D') of the mounting structure (12) as seen in marked up Figure 1. The Office Action further stated the Lin publication teaches the mounting structure (12) is formed integrally with the table top; the table top is formed of blow-molded plastic; a second connecting member (H') is connected to the first support member (E') and the second support member (F'); a second leg (23) is movable between a use position and a storage position; a second support brace (25) includes a first portion and a second portion; and the first portion is attached to the second leg (23) and the second portion is attached to the second connecting member (H') of the support assembly (26, 27).

The Office Action acknowledged that the Lin publication does not expressly disclose a first and second connecting member connected to a center section of the first support member and a center section of the second support member, and first and second openings in the first and second elongated support members to allow for the connection of the first and second connecting members. The Office Action states that, as seen in Figure 1, the first and second connecting members are connected to the ends of the first and second support members. The Office Action contends that at the time of the invention it would have been obvious for a person of ordinary skill in the art to modify the table of Lin by making the connecting members shorter and the support members longer since applicant has not disclosed that having the first and second connecting member connected to a center section of the first support member and a center

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

section of the second support member solves any stated problem or is for any particular purpose and it appears that the support assembly would perform equally well with the first and second connecting members are connected to the centers of the first and second support members since it is functionally equivalent and works equally well.

The Office Action also contended that as ascertained from Figures 1-3, it appears that openings on the connecting members receive the elongated support members. The Office Action contends that it would have been obvious for a person of ordinary skill in the art to modify the support assembly of Lin by having the openings on the elongated support members to receive the connecting members since Applicant has not disclosed that having the openings on the elongated support members solves any stated problem or is for any particular purpose and it appears that the support assembly would perform equally well with the openings on the elongated support members to receive the connecting members since it is functionally equivalent and works equally well.

Further, the Office Action stated that Applicant's arguments filed on 7/30/07 have been fully considered but they are not persuasive. The Office Action stated both attachment surfaces of the elongated support (E', F') and the center section (A', B') of Lin are taught as being generally round which is considered to have portions that are generally planar due to the term "generally" being viewed in the broadest reasonable interpretation to encompass a semicircular surface.

Applicants respectfully traverse this rejection because the Lin publication patent fails to teach, suggest or disclose each and every limitation of Claims 1, 2, 5-7, 9, 10 and 12-16. Nevertheless, as mentioned above, in order to further clarify, more clearly define and/or broaden

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

the claimed invention, and expedite receiving a notice of allowance, Applicants amended independent Claims 1, 10 and 13.

Claim 1

Applicants amended Claim 1, *inter alia*, to provide “the mounting structure including a first generally C-shaped portion including an elongated center section with a first end, a second end and an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom surface of the table top” and “a second generally C-shaped portion including an elongated center section with a first end, a second end and an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom surface of the table top.” In addition, Applicants amended Claim 1 to provide “a first elongated support member including an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the center section of the first generally C-shaped portion of the mounting structure” and “a second elongated support member including an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the center section of the second generally C-shaped portion of the mounting structure.”

Thus, Claim 1 now positively recites the mounting structure includes a first generally C-shaped portion including an elongated center section with a first end, a second end and an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom surface of the table top; and the mounting structure includes a second generally C-shaped portion including an elongated center section with a first end, a second end and an at least

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

substantially planar attachment surface that is disposed generally perpendicular to the bottom surface of the table top. In addition, Claim 1 now positively recites the first elongated support member includes an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the center section of the first generally C-shaped portion of the mounting structure and the second elongated support member includes an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the center section of the second generally C-shaped portion of the mounting structure.

The Lin publication, however, does not teach, suggest or disclose, for example, a mounting structure including a first generally C-shaped portion including an elongated center section with an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom surface of the table top; or a second generally C-shaped portion including an elongated center section with an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom surface of the table top. The Lin publication also does not teach, suggest or disclose a first elongated support member including an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the center section of the first generally C-shaped portion of the mounting structure or a second elongated support member including an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the center section of the second generally C-shaped portion of the mounting structure.

Accordingly, Applicants respectfully submit that Claim 1 is allowable and request that this Section 103(a) rejection be withdrawn. In addition, Applicants respectfully submit that the

Appl. No. : 10/669,740
Filed : September 24, 2003

rejection of dependent Claims 2, 5-7 and 9 be withdrawn at least because these claims are dependent upon amended Claim 1.

Claim 10

Applicants amended Claim 10, *inter alia*, to provide “a first generally C-shaped portion including an elongated center section with an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom portion of the table top,” and “a second generally C-shaped portion including an elongated center section with an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom portion of the table top.” In addition, Applicants amended Claim 10 to provide “a first elongated support member including a first end, a second end and an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the elongated center section of the first generally C-shaped portion of the mounting structure,” and “a second elongated support member including a first end, a second end and an at least substantially a planar attachment surface that is attached to the at least substantially planar attachment surface of the elongated center section of the first generally C-shaped portion of the mounting structure.”

Thus, Claim 10 now positively recites the first generally C-shaped portion includes an elongated center section with **an at least substantially planar attachment surface** that is disposed generally perpendicular to the bottom portion of the table top and the second generally C-shaped portion includes an elongated center section with **an at least substantially planar attachment surface** that is disposed generally perpendicular to the bottom portion of the table top. Claim 10 also positively recites the first elongated support member includes a first end, a

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

second end and an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the elongated center section of the first generally C-shaped portion of the mounting structure; and the second elongated support member includes a first end, a second end and an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the elongated center section of the first generally C-shaped portion of the mounting structure.

The Lin publication, however, does **not** teach, suggest or disclose, for example, a first generally C-shaped portion including an elongated center section with an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom portion of the table top or a second generally C-shaped portion including an elongated center section with an at least substantially planar attachment surface that is disposed generally perpendicular to the bottom portion of the table top. The Lin publication also does **not** teach, suggest or disclose a first elongated support member including an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the elongated center section of the first generally C-shaped portion of the mounting structure; or a second elongated support member including an at least substantially planar attachment surface that is attached to the at least substantially planar attachment surface of the elongated center section of the first generally C-shaped portion of the mounting structure.

Accordingly, Applicants respectfully submit that Claim 10 is allowable and request that this Section 103(a) rejection be withdrawn. In addition, Applicants respectfully submit that the rejection of dependent Claim 12 be withdrawn at least because this claim is dependent upon amended Claim 10.

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

Claim 13

Applicants amended Claim 13, *inter alia*, to provide “a first generally C-shaped portion including an elongated center section with an at least substantially planar attachment portion that is disposed generally perpendicular to the lower portion of the table top,” and “a second generally C-shaped portion including an elongated center section with an at least substantially planar attachment portion that is disposed generally perpendicular to the lower portion of the table top.” Claim 13 also provides “a first support member including an at least substantially planar attachment portion that is connected to the at least substantially planar attachment portion of the first generally C-shaped portion of the mounting structure,” and “a second support member including an at least substantially planar attachment portion that is connected to the at least substantially planar attachment portion of the second generally C-shaped portion of the mounting structure.”

Thus, Claim 13 now positively recites the first generally C-shaped portion includes an elongated center section with an at least substantially planar attachment portion that is disposed generally perpendicular to the lower portion of the table top, and the second generally C-shaped portion includes an elongated center section with an at least substantially planar attachment portion that is disposed generally perpendicular to the lower portion of the table top. Claim 13 also now positively recites the first support member includes an at least substantially planar attachment portion that is connected to the at least substantially planar attachment portion of the first generally C-shaped portion of the mounting structure and the second support member includes an at least substantially planar attachment portion that is connected to the at least substantially planar attachment portion of the second generally C-

Re. : Amendment and Response to Office Action Mailed August 20, 2007
Appl. No. : 10/669,740
Filed : September 24, 2003

shaped portion of the mounting structure.

The Lin publication, however, does **not** teach, suggest or disclose, for example, a first generally C-shaped portion including an elongated center section with an at least substantially planar attachment portion that is disposed generally perpendicular to the lower portion of the table top, or a second generally C-shaped portion including an elongated center section with an at least substantially planar attachment portion that is disposed generally perpendicular to the lower portion of the table top. The Lin publication also does **not** teach, suggest or disclose a first support member including an at least substantially planar attachment portion that is connected to the at least substantially planar attachment portion of the first generally C-shaped portion of the mounting structure or a second support member including an at least substantially planar attachment portion that is connected to the at least substantially planar attachment portion of the second generally C-shaped portion of the mounting structure.

Accordingly, Applicants respectfully submit that Claim 13 is allowable and request that this Section 103(a) rejection be withdrawn. In addition, Applicants respectfully submit that the rejection of dependent Claims 14-16 be withdrawn at least because these claims are dependent upon amended Claim 13.

III. CONCLUSION

In view of the foregoing, Applicant submits that Claims 1, 2, 5-7, 9, 10 and 12-16 are allowable over the cited references and are in condition for allowance. Accordingly, Applicant requests that a Notice of Allowance be promptly issued.

If any further impediments to allowance of this application remain, the Examiner is
